

Testing Walkthrough — Raudah Travels Enhancements

[!IMPORTANT]

Make sure migration `0006_package_flexibility.sql` has been executed before testing Enhancement 5.

Prerequisites

1. **Start the API server** and **frontend dev server**
2. Have at least:
 - An admin account logged in
 - An active agent account (with `commissionRate > 0` and `status active`)
 - At least 2 active packages (for upgrade testing)
 - A few existing pilgrim bookings (some linked to agents, some not)

Enhancement 3: Commission Bug Fix (Upgrade Package)

Test 3A— Upgrade an Agent Pilgrim's Package

1. Go to **Admin** → **Pilgrims** page
2. Find a pilgrim who is registered **under an agent** (look for the agent badge)
3. Click to open the pilgrim detail dialog
4. Click **"Change Package"** or go to the booking edit
5. Select a **different (more expensive) package**
6. Confirm the upgrade

Expected Results:

- ☒ The new `totalPrice` should reflect agent discount + commission deduction (not the raw package price)
- ☒ A payment record should be created for the **difference** (new total - old total)
- ☒ The pilgrim receives a notification: *"Your package has been upgraded to {name}. Additional payment of #X is required."*
- ☒ Check the `commissions` table — the old commission for this booking should be **deleted** and a new one **inserted** with the recalculated amount

Test 3B — Upgrade a Non-Agent Pilgrim

1. Find a pilgrim registered **without an agent**
2. Upgrade their package to a more expensive one

Expected Results:

- ☒ `totalPrice` = raw new package price + room surcharge (no discount/commission logic)
- ☒ No commission records created
- ☒ This should work exactly as before — **zero regression**

Test 3C — Downgrade an Agent Pilgrim

1. Find an agent pilgrim on an expensive package
2. Change to a cheaper package

Expected Results:

- ☒ If already overpaid (`amountPaid >= newPrice`), `status` should auto-change to `confirmed`
- ☒ No pending payment record created (since no additional payment needed)
- ☒ Notification: *"Your package has been changed to {name}. Your new total is #X."*

Enhancement 2: Admin Registration Under Agent

Test 2A— Register Pilgrim Under Agent

1. Go to **Admin** → **Book Pilgrim** page
2. In Step 1 (Package Selection), scroll down to find **"Register Under Agent (Optional)"** section
3. Select an active agent from the dropdown

4. Leave the custom commission field **empty** (to use agent's default)
5. Fill out all pilgrim details and complete registration

Expected Results:

- ☒ Booking is created with `agentId` set to the selected agent
- ☒ The `totalPrice` should be: `packagePrice + roomSurcharge - agentDiscount - commission`
- ☒ A `commissions` record should exist with the correct calculated amount
- ☒ The pilgrim should appear in the **Agent's Dashboard** → Clients list
- ☒ The booking should show the agent badge in Admin → Pilgrims

Test 2B — Register with Custom Commission

1. Go to **Admin** → **Book Pilgrim**
2. Select an agent
3. Enter a custom commission amount (e.g., 25000)
4. Complete the registration

Expected Results:

- ☒ Commission should be exactly ₦25,000 (not the agent's default rate)
- ☒ `totalPrice` should be: `packagePrice + roomSurcharge - 25000`
- ☒ Check `commissions` table — amount should be 25000

Test 2C — Register Without Agent (Regression Check)

1. Go to **Admin** → **Book Pilgrim**
2. Leave the agent selector on "**Direct Registration (No Agent)**"
3. Complete registration normally

Expected Results:

- ☒ No `agentId` on the booking
 - ☒ No commission record created
 - ☒ `totalPrice` = raw package price + surcharge (no discount)
 - ☒ **Works exactly as before** — zero regression
-

Enhancement 1: Bulk Pilgrim Selection & Print ID Tags

Test 1A — Departure Date Filter

1. Go to **Admin** → **Pilgrims** page
2. Find the "**Departure From**" and "**Departure To**" date inputs in the filter bar
3. Set a date range that matches some bookings

Expected Results:

- ☒ Only pilgrims with departure dates within the range are shown
- ☒ The filter count badge updates
- ☒ Clearing the dates shows all pilgrims again

Test 1B — Bulk Selection

1. Use the **checkbox** next to each pilgrim to select a few
2. Or use the "**Select All**" checkbox in the list header to select the entire page

Expected Results:

- ☒ A blue selection toolbar appears at the top showing "**X Pilgrims Selected**"
- ☒ The toolbar has: **Export Selected**, **Print ID Tags**, **Clear** buttons
- ☒ If there are more pilgrims than the current page, a "**Select all X matching records**" link appears

Test 1C — Export Selected (Excel)

1. Select some pilgrims
2. Click "**Export Selected**"
3. In the export dialog, select which columns to include
4. Click **Export**

Expected Results:

- ☒ An .xlsx file downloads with only the selected pilgrims
- ☒ Only the selected columns are included
- ☒ Data is correct (names, passport numbers, package info, etc.)

Test 1D — Print ID Tags ★ NEW

1. Select 2-5 pilgrims
2. Click the **yellow "Print ID Tags"** button

Expected Results:

- ☒ A new browser tab opens with formatted ID tag cards
- ☒ Each card shows: profile photo (or placeholder), full name, passport number, package name, reference, phone
- ☒ Cards have "RAUDAH TRAVELS — HAJJ/UMRAH 2026" footer
- ☒ The browser print dialog opens automatically
- ☒ Cards are arranged for print with proper page breaks

Enhancement 4: Admin Funds to Agent Pilgrims

Test 4A — Add Payment to Agent Pilgrim

1. Go to **Admin** → **Pilgrims** or **Admin** → **Payments**
2. Find a pilgrim who is **under an agent**
3. Record a new payment (e.g., ₦50,000 cash, verified)

Expected Results:

- ☒ Payment is recorded successfully (same as before)
- ☒ The **agent receives a notification**: *"A payment of ₦50,000 has been recorded and verified for your client {name} (Ref: {ref})."*
 - Check: Log in as the agent → Notifications bell icon
- ☒ The **activity log** (Admin → Activity) shows enriched data:
 - `isAgentPilgrim: true`
 - `agentBusinessName: "Agent Name"`

Test 4B — Add Payment to Non-Agent Pilgrim (Regression)

1. Record a payment for a pilgrim who has **no agent**

Expected Results:

- ☒ Works exactly as before
- ☒ No notification sent (no agent to notify)
- ☒ Activity log shows `isAgentPilgrim: false`

Enhancement 5: Package Flexibility

Test 5A — Create Package with Pricing Overrides

1. Go to **Admin** → **Packages**
2. Click **Create Package**
3. Fill in standard details (name, price, capacity, dates, etc.)
4. Scroll to **"Pricing Overrides (Optional)"** section
5. Set:
 - Child Price: 200000
 - Infant Price: 50000
 - Single Room Surcharge: 150000
 - Triple Room Surcharge: 0
6. Save the package

Expected Results:

- ☒ Package is created successfully
- ☒ In the database, `packages.pricing_overrides` should contain:

```
{
  "childPrice": 200000,
  "infantPrice": 50000,
  "roomSurcharges": {
    "Single": 150000,
    "Triple": 0
  }
}
```

Test 5B — Edit Existing Package Overrides

1. Click edit on the package you just created
2. The pricing overrides should be **pre-populated** with the values you set
3. Change the child price to 250000
4. Save

Expected Results:

- ☒ Overrides are loaded correctly when editing
- ☒ Changes are saved correctly

Test 5C — Register Child Under Overridden Package

1. Go to **Admin** → **Book Pilgrim**
2. Select the package with pricing overrides
3. Set pilgrim type to **"Child"**
4. Complete registration

Expected Results:

- ☒ `totalPrice` should use the **package-level** child price (200000 or 250000)
- ☒ NOT the global site setting
- ☒ If you register a child under a package **without** overrides, it should use the global setting

Test 5D — Package Without Overrides (Regression)

1. Create or edit a package — leave all pricing overrides **empty**
2. Register a child or infant under this package

Expected Results:

- ☒ Falls back to the global `child_infant_pricing` site setting
- ☒ Works exactly as before — **zero regression**

Quick Regression Checklist

[!WARNING]

Run through these to ensure nothing is broken:

Scenario	Expected
Regular user self-registration	☒ Unchanged
Agent self-registers a client (wallet flow)	☒ Unchanged + uses package overrides
Agent self-registers a client (standard flow)	☒ Unchanged + uses package overrides
Admin edits pilgrim details (name, passport, etc.)	☒ Does NOT trigger commission recalc
Admin changes pilgrim status	☒ Unchanged
Paystack webhook processes payment	☒ Unchanged
Export all pilgrims to Excel	☒ Unchanged
Package listing on public site	☒ Unchanged (pricingOverrides not exposed to public)
Agent dashboard shows their clients	☒ Shows admin-registered clients too

Code Review Findings

[!NOTE]

During review, 1 bug was found and fixed:

Finding	Severity	Fix
Duplicate agent DB query in payments.ts — agent was fetched twice (once for audit log, once for notification)	Low	☒ Fixed — cached agent record (performance) and reused it

No other bugs found. All edge cases validated:

- `customCommission: 0` → correctly sets zero commission
- `pricingOverrides.infantPrice: 0` → correctly means "no additional charge" (override is detected, 0 is added)
- Agent not found after deletion → notification silently skipped (null check)
- Non-agent bookings → all agent blocks are safely guarded by `if (booking.agentId)`
